About Me

Product Designer with 5 years of experience designing enterprise workflows and AI-influenced systems in high-complexity environments. I specialize in state-driven interaction models, role-based system design, and reducing cognitive load in operational and decision-heavy contexts.
My work focuses on making complex systems intelligible, aligning human intent, system feedback, and business constraints into coherent, reliable product experiences.

Professional Experience

UX Designer - Human-AI Interaction & UX Strategy

July 2023 - Present

ITC Infotech, Bangalore

- Led the design of state-driven material movement systems used in large-scale manufacturing environments.
- Defined inventory state transitions (pick, validation, transfer, reconciliation) to prevent stock inconsistencies and operational errors.
- Designed role-based workflows for material handlers and kitters to reduce ambiguity in high-volume environments.
- Designed handheld scanning interfaces under strict hardware and environmental constraints.
- Partnered with engineering teams to translate operational edge cases into resilient interaction and error-handling models.
- Contributed to workflow intelligence improvements through structured system feedback and validation logic.

UX Designer

Aug 2021 - June 2023

Flyers Soft, Chennai

- Led UX design for dashboard-based and workflow-heavy enterprise applications.
- Designed role-based dashboards for financial monitoring and transaction management (confidential banking client).
- Structured high-density data environments into decision-ready views through clear information hierarchy.
- Designed exception handling and validation flows for audit-sensitive financial operations.
- Conducted user interviews and usability testing to validate interaction models and improve task efficiency.
- Simplified complex information architectures to reduce cognitive load in operational systems.

Education

Bachelor of Engineering in Computer Science Engineering

2021

Peri Institute of Technology

Relevant Coursework:

- Google UX Design (Coursera) - 2024
- AI for Everyone, DeepLearning.AI - 2024
- Principles of UX Design, Meta - 2024

Projects

Enterprise Inventory & Material Movement System

2025

Manufacturing Domain | Zebra Handheld Devices

State-driven workflow logic · Real-time validation · Error-handling flows · Role-based permissions

- Designed state-driven workflows across mobile scanning devices for large-scale inventory operations.
- Defined system states and transition logic to ensure traceability and stock integrity.
- Structured role-based permissions and validation flows to reduce reconciliation errors.
- Designed interaction patterns optimized for hardware constraints and time-sensitive environments.

Enterprise Financial Management Dashboard

2025

Banking Domain

High-density data tables · Validation logic · Compliance constraints · Permission hierarchies

- Redesigned role-based dashboards for fund monitoring and transaction oversight.
- Simplified high-density financial data into structured, decision-support views.
- Designed exception tracking and system feedback mechanisms to support compliance-sensitive workflows.
- Collaborated cross-functionally to ensure accurate system-state representation and data clarity.

Technical Skills

Product & UX

Enterprise Workflow Design · Role-Based Systems · Information Architecture · UX Strategy · Usability Testing · Interaction Design · Design Systems

Human-AI & System Thinking

Intent-Oriented Interaction Design · Trust & Transparency Patterns · Human-in-the-Loop Systems · Explainability-Aware Design · AI-Assisted Workflow Modeling

Tools

Figma (Advanced) · Framer · Spline · Adobe XD · Illustrator · Photoshop

Languages

English (Fluent) · Tamil (Native) · Hindi (Intermediate) · French (basic)
